S1 | MHW-intensity forecast errors in time and space

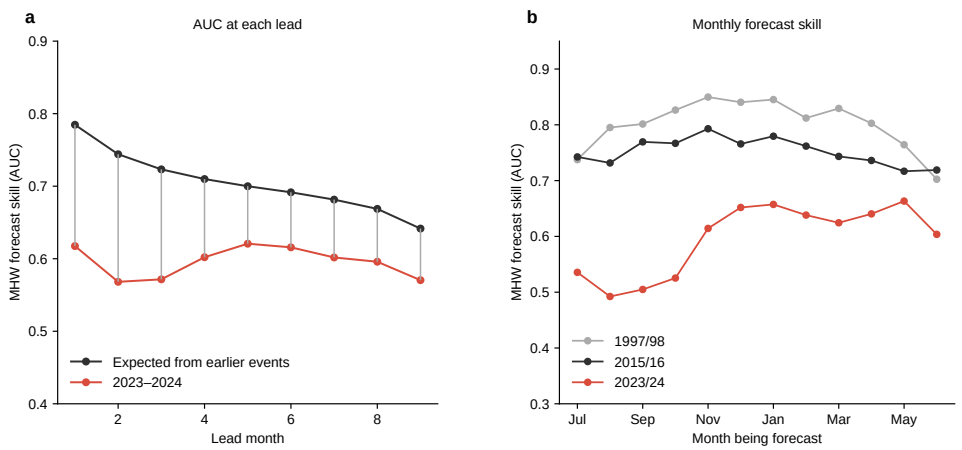

S2 | ENSO-phase associations with MHW forecast skill

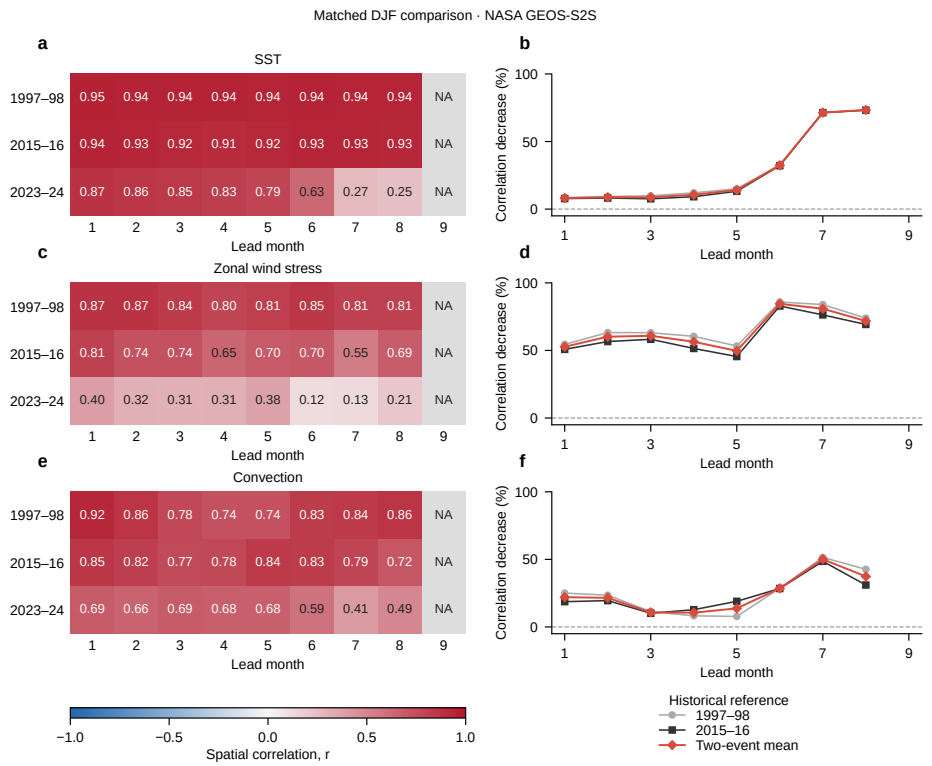

S3 | Sensitivity of the ENSO–skill relationship to event selection

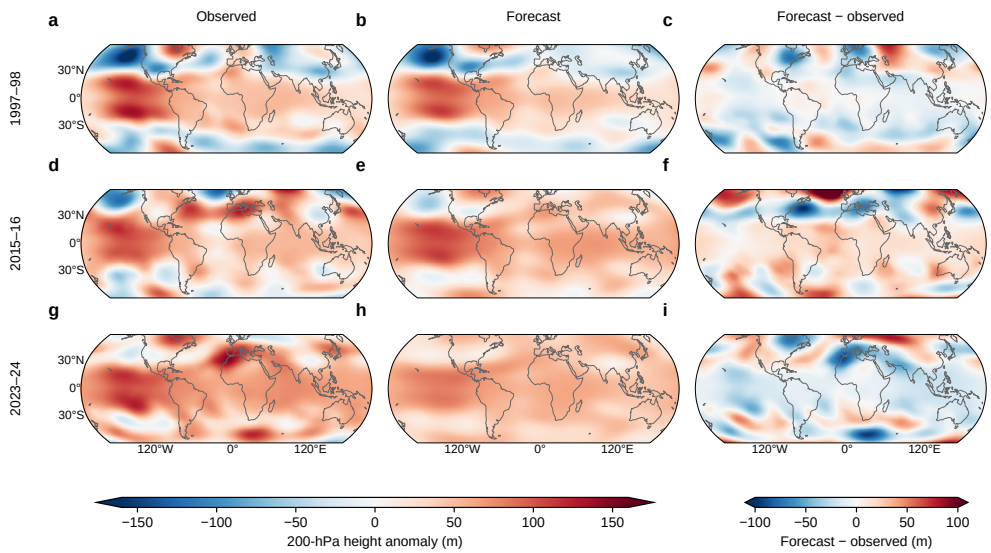

S4 | MHW forecast skill across lead months and event development

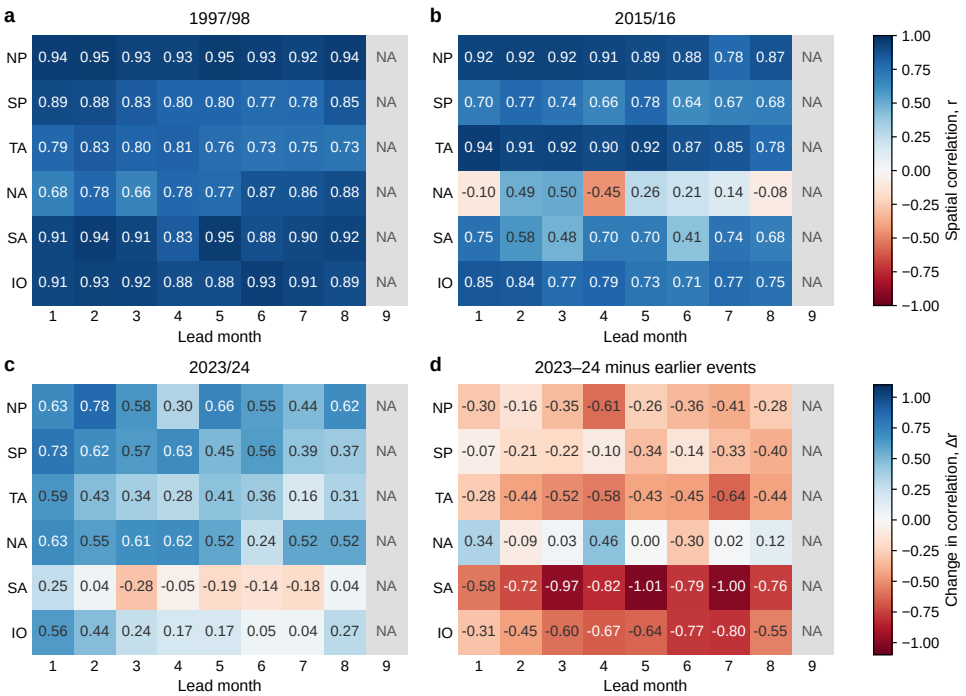

S5 | Tropical forecast skill under matched model, season and lead conditions

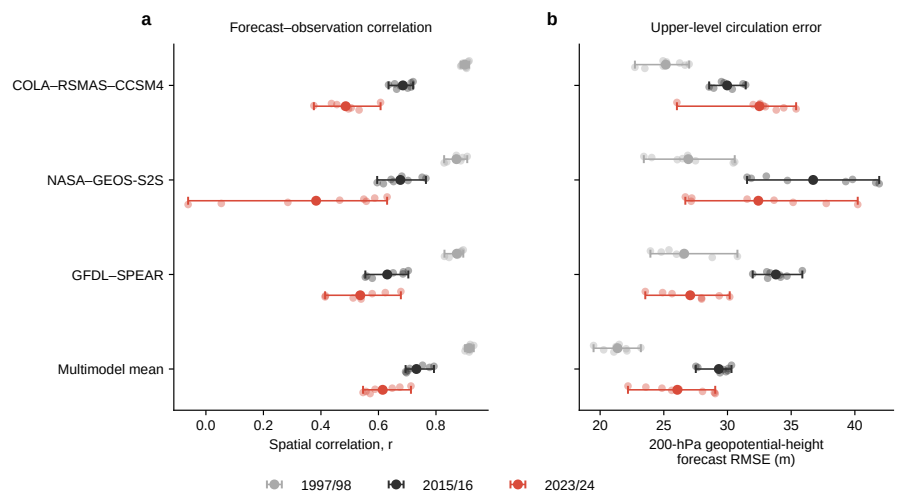

S6 | Observed and forecast upper-level circulation in three El Niño events

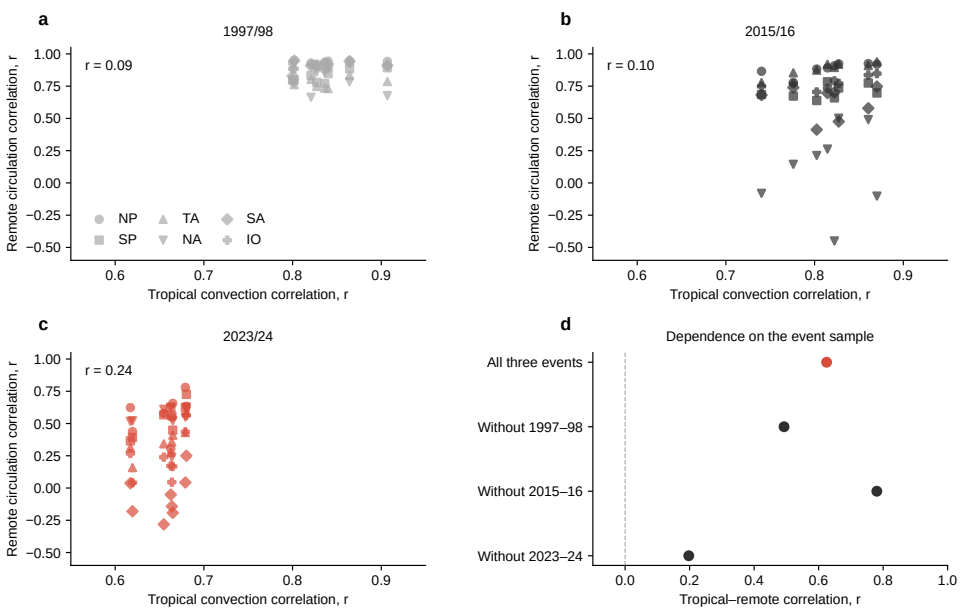

S7 | Regional circulation forecast skill across lead months

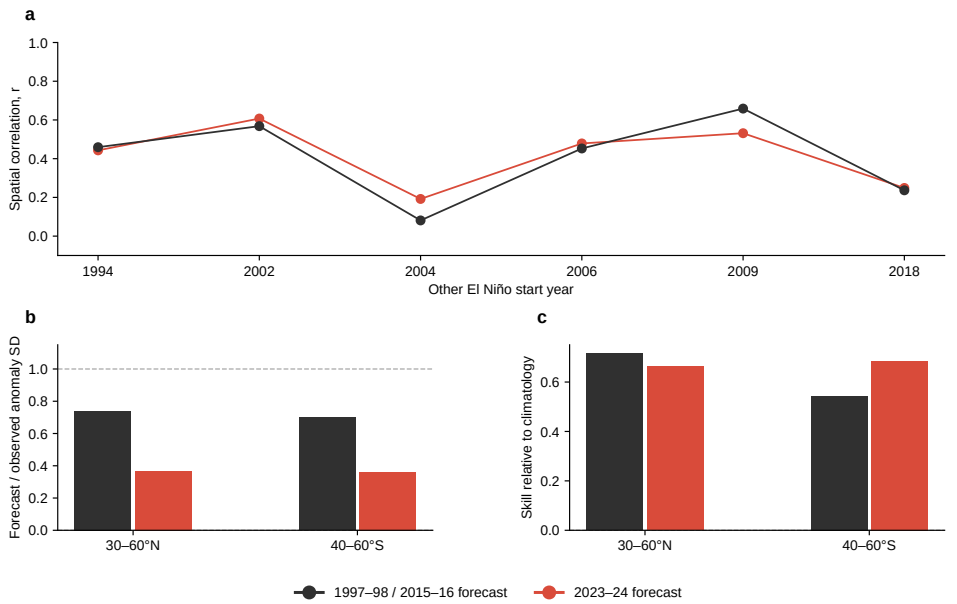

S8 | Circulation forecast correlations and RMSE across models

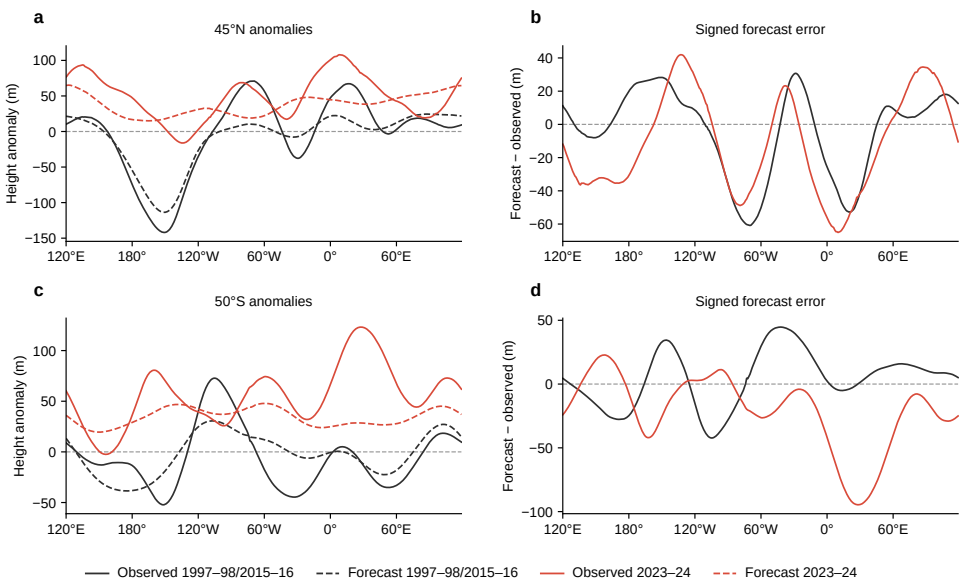

S9 | Links between tropical and remote forecast errors depend on the El Niño event

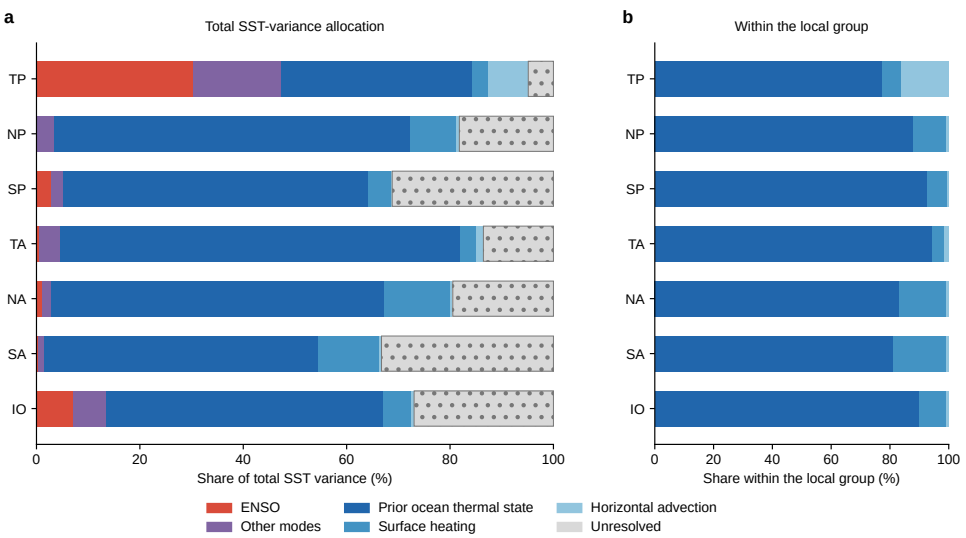

S10 | Circulation pattern similarity, amplitude and error relative to climatology

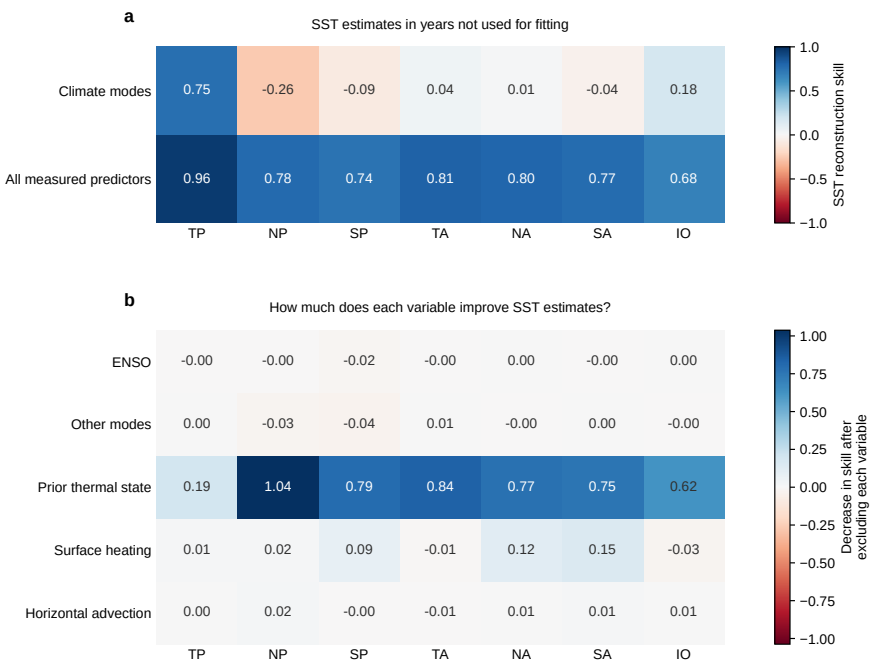

S11 | Longitudinal differences in observed and forecast height anomalies

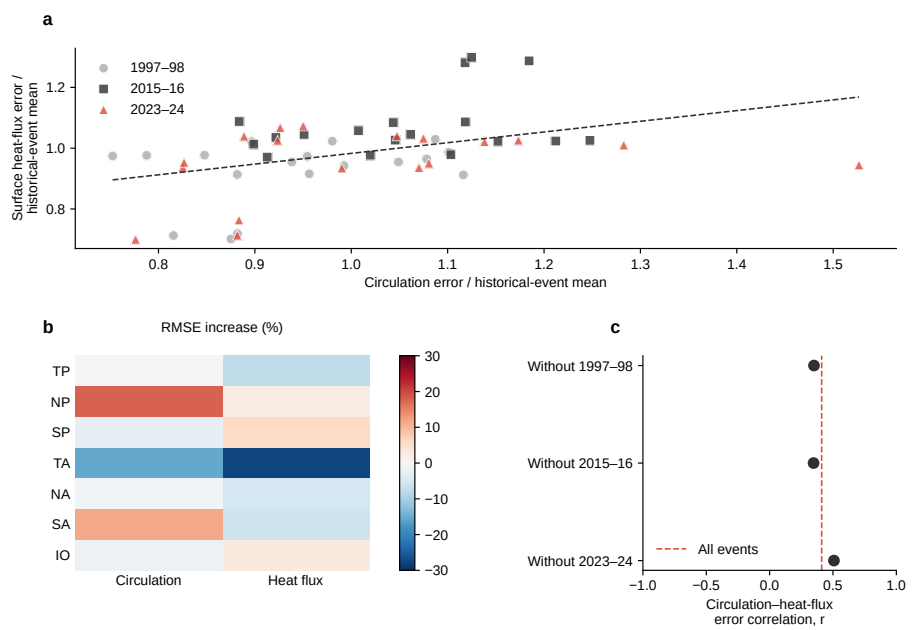

S12 | Historical SST variance associated with climate modes and local processes

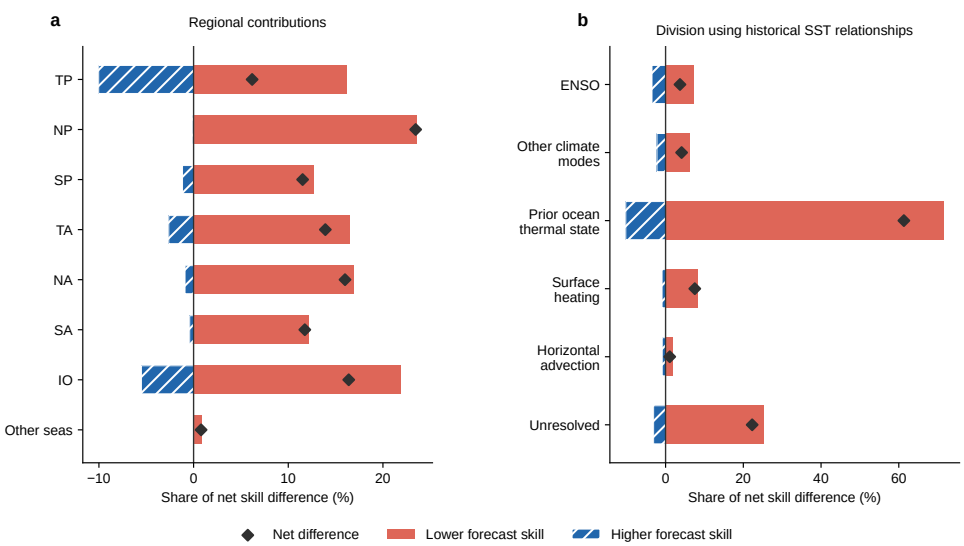

S13 | Testing regional SST estimates in years excluded from fitting

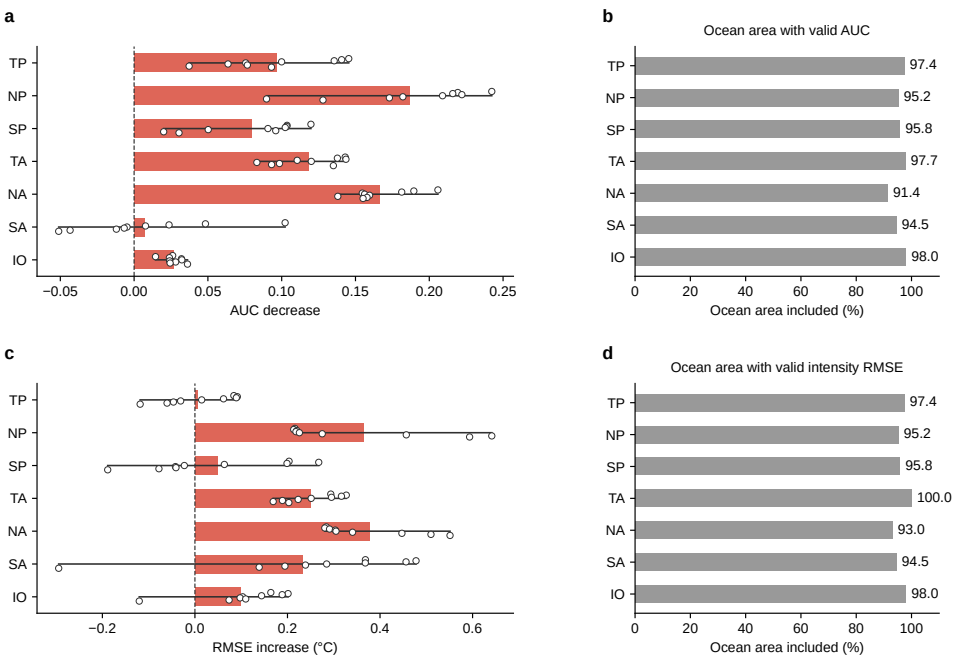

S14 | CFSv2-only circulation and surface heat-flux error comparison

S15 | Regional and component accounting of lower and higher forecast skill

S16 | Regional skill changes and valid ocean-area coverage

S17 | Sensitivity to verification duration and spatial pooling
